Novel peptide comprising acetyl CoA carboxylase (ACCase) having deleted biotin binding domain and carboxy transferase domain, and having functional biotin carboxylase domain, useful for identifying ACCase inhibitors/activators.

2; 56pp; English Claim 8; SEQ ID NO

The invention relates to a novel peptide (I) comprising an acetyl CoA carboxylase (ACCase) having a deleted biotin binding domain, having a deleted carboxy transferase domain, and having a functional biotin carboxylase domain. A peptide of the invention is useful for identifying Acetyl CoA carboxylase inhibitors or activators, which involves combining the peptide and a compound to be tested for the ability to bind to the biotin carboxylase domain, under conditions that permit binding to the biotin carboxylase domain, the presence of binding indicating the compound is or may be an Acetyl CoA carboxylase inhibitor or activator. The method further involves employing the identified binding compound in

```
an assay to detect inhibition or enhancement of Acetyl CoA carboxylase activity, and selecting a compound that inhibits or activates Acetyl CoA carboxylase activity. A peptide of the invention is also useful for identifying fungicides, which involves combining the peptide and a compound to be tested for the ability to bind to the biotin carboxylase domain, under conditions that permit binding to the biotin carboxylase domain, the presence of binding indicating the compound is or may be fungicide, employing the identified compound in an assay to detect inhibition of Acetyl CoA carboxylase activity, and selecting a compound that inhibits Acetyl CoA carboxylase activity. The present sequence represents an ACCase BC domain of the invention.
                                                                                                                                                                                                                                                                                    180
                                                                                                                                                                                                                                                                                                                                                240

```
The present sequence is the protein sequence of the acetyl-CoA carboxylase (ACC) gene of Phaffia rhodozyma (ATCC 74438). The sequence shows 56.28% amino acid sequence identity to a known ACC from Emericella nidulans. ACC is an enzyme involved in fatty acid biosynthesis. Its substrate is acetyl-CoA, which is also involved in the carotenogenic pathway of P. rhodozyma. A claimed method for producing ACC comprises culturing a recombinant organism containing a vector comprising an ACC polynucleotide. Also claimed is a recombinant organism in which gene expression of ACC is reduced as a result of antisense technology, site-directed mutagenesis, error-prone PCR or chemical mutagenesis. The cerombinant organism is preferably P. rhodozyma or Xanthophylomyces dendrorhous containing a vector comprising an antisense polynucleotide. It is used in a claimed process for producing carotenoids such as astaxanthin, beta-carotene, lycopene, zeaxanthin and canthaxanthin. The method is useful for increasing microbial production of carotenoids such as a sataxanthin, which has antioxidant properties and is used as a colouring agent especially of farmed fish.
                                                                                                                                                                                                                                                                                                          New acetyl-CoA carboxylase polynucleotide derived from Phaffia rhodozyma or Xanthophylomyces dendrorhous, useful for producing a recombinant vector or for increasing microbial production of carotenoids.
                                                                                                                                                                                                                                                                                                                                                                                           3; 82pp; English

It was deduced from a 8123 bp DNA sequence isolated from an ECORI genomic library by screening with a fragment of the Saccharomyces cerevisiae ACOACase gene. The amino acid sequence has 63 % identity and 77 % similarity to the yeast enzyme; it also has 47 % identity (67 % similarity) with the ACOACase proteins from rat and chicken. ACOACase activity is the preferred target biochemical activity in a new screening system. (Updated on 16-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                         ACCase;

carboxylase (ACCase) having a deleted biotin binding domain, having a deleted carboxy transferase domain, and having a functional biotin carboxylase domain. A peptide of the invention is useful for identifying Acetyl CoA carboxylase inhibitors or activators, which involves combining the peptide and a compound to be tested for the ability to bind to the biotin carboxylase domain, under conditions that permit binding to the biotin carboxylase domain, the presence of binding indicating the compound is or may be an Acetyl CoA carboxylase inhibitor or activator.

The method further involves employing the identified binding compound in an assay to detect inhibition or enhancement of Acetyl CoA carboxylase activity, and selecting a compound that inhibits or activates Acetyl CoA carboxylase activity, A peptide of the invention is also useful for identifying fungicides, which involves combining the peptide and a compound to be tested for the ability to bind to the biotin carboxylase domain, under conditions that permit binding to the biotin carboxylase domain, determining whether or not the compound binds to the biotin carboxylase domain, determining whether or not the compound in an assay to detect inhibition of Acetyl CoA carboxylase activity, and selecting a compound in inhibition of Acetyl CoA carboxylase activity, and selecting a compound to the inhibits Acetyl CoA carboxylase activity, The present sequence represents an Accase BC domain of the invention.

The invention relates to a recombinant DNA construct comprising a promoter functional in a plant cell, where the promoter is positioned to prowide for expression of a polymucleotide encoding a polypeptide from a microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a transformed plant having an improved property. The plant is a crop plant such as maize or soybean. The method of producing a transformed plant having an improved property comprises transforming a plant with the recombinant DNA construct and growing the transformed plant, where the polynucleotide or polypeptide is useful for improving plant properties.

The recombinant DNA construct is useful for improving plants with improved plant properties, e.g. improved cold, heat or drought tolerance, tolerance to plant disease, better growth rate by modification of increased rate of the cell cycle pathway with plant growth regulators, increased rate of homologous recombination, modification of carbohydrate, nitrogen or phosphorus use and/or uptake, by modification of photosynthesis or by providing improved plant growth and development under at least one stress condition, improved plant growth and development under at least one stress condition, improved lightin production or improved galactomannan production. This sequence represents a bacterial polypeptide used in the scope of the invention. Note: The sequence data for this patent did not form improved specification but was obtained in electronic forms from inspin of rendata mandom content.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        from USPTO at segdata.uspto.gov/seguence.html
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 1; SEQ ID NO 3698; 122pp; English

The invention relates to a recombinant DNA construct comprising a promoter functional in a plant cell, where the promoter is positioned to promoter functional in a plant cell, where the promoter is positioned to prowide for expression of a polynucleotide encoding a polypeptide from a microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a transformed plant with the such as maize or soybean. The method of producing a transformed plant construct and growing the transformed plant where the polynucleotide or polypeptide is useful for improving plant with the recombinant DNA construct is useful for improving plant with the polynucleotide or polypeptide is useful for improving plants with the recombinant DNA construct is useful for improving plants with the plant properties, e.g. improved cold, heat or drought tolerance, tolerance to herbicides, extreme osmotic conditions, pathogens or pests, increased resistance to plant disease, better growth regulators, increased rate of the cell cycle pathway with plant growth regulators, increased rate of content, improved plant growth and development under at least one stress providing improved lightin production of improved galactomannan production. This sequence represents a bacterial polypeptide used in the scope of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic correct form part of the printed specification but was obtained in electronic correct.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     œ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence represents acetyl CoA carboxylase (ACCase) isolated from Candida albicans. The C. albicans ACCase is used in an assay to identify inhibitors of the enzyme. This is useful in pharmaceutical research. Inhibitors of ACCase are useful as antifungal agents. The invention also provides a novel expression system using Saccharomyces cerevisiae to express the C. albicans ACCase gene in quantifiable amounts. Expression of the C. albicans ACCase gene in S. cerevisiae C overcomes prior art problems of isolation and purification of the ACCase. It is possible to achieve about 14-fold overexpression relative to the wild: type host S. cerevisiae strain JK9-3D. This is achieved by replacing the C. albicans promoter in the expression construct by a stronger and preferably inducible promoter such as the S. cerevisiae GALI promoter
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          89

the peptide and a compound to be tested for the ability to bind to the biotin carboxylase domain, under conditions that permit binding to the biotin carboxylase domain, determining whether or not the compound binds to the biotin carboxylase domain, the presence of binding indicating the compound is or may be an Acetyl CoA carboxylase inhibitor or activator.

The method further involves employing the identified binding compound in a sasy to detect inhibition or enhancement of Acetyl CoA carboxylase activity, and selecting a compound that inhibits or activates Acetyl CoA carboxylase activity. A peptide of the invention is also useful for identifying fungicides, which involves combining the peptide and a compound to be tested for the ability to bind to the biotin carboxylase domain, determining whether or not the compound binds to the biotin carboxylase domain, the presence of binding indicating the compound is or may be fungicide, employing the identified compound in an assay to detect inhibition of Acetyl CoA carboxylase activity, and selecting a compound the inhibits an ACCase BC domain of the invention.

The invention relates to multiprotein complexes from eukaryotes. Proteins of the invention and DNA sequences encoding them are given in records ABR52568-ABR53903 and ACC60610-ACC61944 respectively. The complexes are obtainable by using a protein as a bait and isolating the set of proteins which is attached thereto from cells. Such protein complexes may comprise up to 30 distinct proteins. Protein complexes of the invention are useful for diagnosing a disease or disorder, or as a target for an active agent of a pharmaceutical, preferably a drug target in the treatment or prevention of a disease or disorder. Note: The sequence data for this patent is not represented in the printed specification, but is based on sequence information supplied by the European Patent Office. The complete document is available on CD-ROM
                                                                                                                                                                                                                                                                                                                   0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       123 HAVWAGWGHASENPRLPESLAASKHKIIFIGPPGSAMRSLGDKISSTIVAQHADVPCMPW

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ਠੇ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to novel protein complexes comprising a first and a second protein, or its derivative, fragment, homologue or variant. The proteins are selected from given protein complexes, which are not defined in the specification. The variants are encoded by nucleic acids that hybridize to the nucleic acids encoding the proteins under low stringency conditions. The protein complexes are useful as targets for an active agent of a pharmaceutical. These protein complexes are particularly useful as drugs targets for the treatment or preventing of a disease or disorder. The complexes and methods above are useful in diagnosing or screening for the presence of a disease or disorder or a predisposition for developing a disease or disorder in a subject. These are also useful in screening for a drug for treatment or prevention of a disease or disorder. The molecule that modulates the amount, activity or protein components of the complex is useful for the manufacture of a medicament of for the treatment or prevention of a disease or disorder. This sequence corresponds to a protein of the invention. (Note: the sequence data for this patent did not form part of the printed specification but was

The invention relates to a recombinant DNA construct comprising a promoter functional in a plant cell, where the promoter is positioned to prowide for expression of a polynucleotide encoding a polypeptide from a microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a transformed plant such as maize or soybean. The method of producing a transformed plant such as maize or soybean. The method of producing a transformed plant such as maize or soybean. The method of producing a plant with the recombinant DNA construct and growing the transforming plant with the polynucleotide or polypeptide is useful for improving plant with the comproved plant properties, e.g. improved cold, heat or drought tolerance. The recombinant DNA construct is useful for producing plants with improved plant properties, e.g. improved cold, heat or drought tolerance, tolerance to herbicides, extreme osmotic conditions, pathogens or pests, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of content, improved plant growth and development under at least one stress condition, improved plant growth and development under at least one stress proved the condition, improved lignin production or improved galactomannan production. This sequence represents a bacterial nolvmential.

The invention relates to a recombinant DNA construct comprising a promoter functional in a plant cell, where the promoter is positioned to prowide for expression of a polynucleotide encoding a polypeptide from a microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a transformed plant having an improved property. The plant is a crop plant such as maize or soybean. The method of producing a transformed plant comprises transforming a plant with the recombinant DNA construct and growing the transformed plant, where the polynucleotide or polypeptide is useful for improving plant with the recombinant DNA construct is useful for improving plants with improved plant properties, e.g. improved cold, heat or drought tolerance, tolerance to herbicides, extreme osmotic conditions, pathogens or pests, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of homologous recombination, modified seed oil or protein yield and/or content, improved plant growth and development under at least one stress conduction, improved plant growth and development under at least one stress conduction. This sequence represents a bacterial polypeptide used in the scope of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic conduction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         337
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              239
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      218

```

The invention relates to novel protein complexes comprising a first and a second protein, or its derivative, fragment, homologue or variant. The proteins are selected from given protein complexes, which are not defined in the specification. The variants are encoded by nucleic acids that hybridize to the nucleic acids encoding the proteins under low stringency conditions. The protein complexes are useful as targets for an active agent of a pharmaceutical. These protein complexes are particularly useful as drugs targets for the treatment or preventing of a disease or disorder. The complexes and methods above are useful in diagnosing or screening for the presence of a disease or disorder or a predisposition for developing a disease or disorder in a subject. These are also useful in screening for a drug for treatment or prevention of a disease or disorder. The molecule that modulates the amount, activity or protein components of the complex is useful for the manufacture of a medicament or prevention of a disease or disorder. This sequence corresponds to a protein of the invention. (Note: the sequence data for the print of the print spatent did not form part of the print of protein but was electronic format). EPO in the this patent obtained fr

The invention relates to a novel peptide (I) comprising an acetyl CoA carboxylase (ACCase) having a deleted biotin binding domain, having a deleted carboxylase (ACCase) having a deleted biotin binding domain, having a deleted carboxylase domain. A peptide of the invention is useful for identifying Acetyl CoA carboxylase inhibitors or activators, which involves combining the peptide and a compound to be ested for the ability to bind to the biotin carboxylase domain, under conditions that permit binding to the biotin carboxylase domain, the presence of binding indicating the compound is or may be an Acetyl CoA carboxylase inhibitor or activator. The method further involves employing the identified binding compound in an assay to detect inhibition or enhancement of Acetyl CoA carboxylase activity, and selecting a compound that inhibits or activates Acetyl CoA carboxylase activity. A peptide of the invention is also useful for identifying fungicides, which involves combining the peptide and a compound to be tested for the ability to bind to the biotin carboxylase domain, determining whether or not the compound in an assay to detect may be fungicide, employing the identified compound in an assay to detect
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      378
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             438

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention comprises a crystallisable composition containing a carboxyltransferase (CT) domain of acetyl-coenzyme A (acetyl-CoA) carboxylase. The composition of the invention is useful for treating metabolic syndrome, diabetes, obesity, cardiovascular disease, atherosclerosis, depression, cancer, hyperlipidaemia, dyslipidaemia, hypertension, hyperuricaemia and renal disfunction. The present aming acid sequence represents a human acetyl-CoA carboxylase of the invent

                                                                                                                                                                                                                             5
```

The present sequence represents human acetyl coenzyme A-carboxylase alpha (ACC-alpha). The ACC-alpha protein was used in the course of the invention. The specification describes a molecular complex comprising a polypeptide having amino acids 1640-1663 of the human BRCA1 protein (or

```
similar sequence from some other animal species), and a polypeptide that is a part of the acetyl coenzyme A-carboxylase alpha (ACC-alpha) protein able to bind the BRCAl protein. The complex is implicated in predisposition to cancer of breast and ovary. It is used to screen for compounds that modulate interaction between BRCAl and ACC-alpha, which are potentially useful for treatment, prevention and diagnosis of cancer, and to identify endogenous ligands. Modulated formation of the complex can be used for diagnosis of cancer. Antibodies directed against specific parts of human ACC-alpha are useful for localization of the complex in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is the protein sequence for human acetyl-Coenzyme carboxylase-alpha (ACC-alpha). This sequence can be used for in vitro diagnosis of cancer (or of an increased risk of developing it), by detecting ACC-alpha gene mutations or polymorphisms, or altered ACC-all protein expression, relative to a control population. The method is particularly used to diagnose cancer, especially of breast or ovary, or assessing the risk of developing such cancers
                                                                                                                                                                                                                                          acetyl-Coenzyme A-carboxylase-alpha; ACC-alpha; cancer;

                                                                                                                                                                                                                                                                                                               The present sequence is a variant sequence for human acetyl-Coenz carboxylase-alpha (ACC-alpha). This sequence can be used for in v diagnosis of cancer (or of an increased risk of developing it), b detecting ACC-alpha gene mutations or polymorphisms, or altered A protein expression, relative to a control population. The method particularly used to diagnose cancer, especially of breast or ova for assessing the risk of developing such cancers. Note: The pressequence was not shown in the specification, but was derived from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     EVPGSPVFVMKLAGQARHLEVQLLADQYGNAISIFGRDCSVQRRHQKIIEEAPV

diagnosis of cancer (or of an increased risk of developing it), by detecting ACC-alpha gene mutations or polymorphisms, or altered ACC-alpha protein expression, relative to a control population. The method is particularly used to diagnose cancer, especially of breast or ovary, or for assessing the risk of developing such cancers. Note: The present sequence was not shown in the specification, but was derived from
                                                                                                                                                                          161

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             174
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       232
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                    or more
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SDDVYQ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a novel nucleic acid (I) comprising (i) a 4047 bp sequence (ABN85738) or AAF59156; (ii) a segment with at least 14 bp from (i); (iii) a sequence that hybridizes to (i) or (ii) at 37-500C; (iv) a sequence at least 60% identical with (i) or (ii); (v) a complement of (i)-(iv) or (vi) an equivalent of (i)-(iv) within the degeneracy of the genetic code. (I) and the encoded polypeptide (II, ABB83866) having ACCase (acetyl-CoA carboxylase, EC 6.4.1.2) activity are used to identify insecticidal and acaricidal agents that act by modulating activity or expression of ACCase, an essential enzyme for survival of insects. The present sequence is that of the Drosophila melanogaster ACCase of the

When the promoter (or the Accalpha structural gene) is replaced, at least in part, by a sequence that is altered by deletion or substitution, then expression of Accalpha in the milk gland is reduced and the milk produced

(by cattle, sheep or goats) has reduced fat content. Analysis of the polymorphic 933-966 region of (Accalpha) is useful for genotyping animals, producing a genotype that is directly correlated with Accalpha expression during lactation and with fat content of the milk. This makes it possible to generate populations of cattle that produce milk of high or low fat content by classical breeding methods. Accalpha is a lactation-specific, inducible promoter for expressing foreign proteins in the milk and, when modified, results in milk of reduced fat content, which facilitates recovery of proteins. This sequence represents a fragment from bovine Accalpha which contains a fragment of exon 5A exon 6 and exon?

The invention relates to novel diagnostic and therapeutic polynucleotides selected from one of the 2722 sequences defined in the specification. A polynucleotide of the invention may have a use in gene therapy. The human diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be used to diagnose a particular condition, disease or disorder associated used to diagnose a particular condition, disease or disorder associated with human molecules, e.g. cell proliferative disorder, endocrine autoimmune/inflammatory disorders, developmental disorders, or disorder, neurological disorders, gastrointestinal disorders, or infections caused by virus, bacteria, fungi or parasite. The dithp molecules may also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline gene therapy. The present sequence represents a dithp protein of the invention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO at www.wipo.int/pct/en/sequences/listing.htm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         303
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           363

The present invention relates to novel human drug metabolising enzymes, DME-1 to DME-13 (ABP59210-ABP59222) and their coding sequences (ABZ81301-ABZ81313). The sequences are useful for diagnosing, treating or preventing disorders associated with aberrant expression of DME, particularly cell proliferative disorders (e.g. arteriosclerosis, atherosclerosis, cirrhosis, paroxysmal nocturnal haemoglobinuria, polycythaemia vera, psoriasis, primary thrombocytopenia or cancer), developmental disorders (e.g. renal tubular acidosis, anaemia or mental retardation), endocrine (e.g. renal tubular acidosis, diabetes), eye disorders (e.g. glaucoma, keratitis), metabolic (e.g. hyperlipidaemia, cystic fibrosis), gastrointestinal disorders (e.g. pastroenteritis, diarrhoea), liver disorders (e.g. hepatitis, Reye's syndrome), or autoimmune/inflammatory disorders (e.g. AIDS, allergies, asthma, autoimmune/inflammatory disorders (e.g. AIDS, allergies, asthma, autoimmune thyroiditis, irritable bowel syndrome, rheumatoid arthritis, solderatitis, Reiter's syndrome, rheumatoid arthritis, syndrome, uveitis). They are also useful in the assessing the effects of exogenous compounds on the expression of nucleic acid and amino acid sequences of DME. The polynucleotides encoding DME are useful
                                                                         New drug metabolizing enzymes (DME) useful for diagnosing, treating preventing diseases or conditions associated with aberrant DME expression, e.g. cancer, AIDS, atherosclerosis, diabetes, glaucoma, hepatitis or osteoporosis.
                                                                                                                                                                                                           Claim 1; Page 149-155; 181pp; English

This invention describes novel secreted proteins (SECP) which have antiarteriosclerotic, antiatherosclerotic, hepatotropic, cytostatic, antiarteriosclerotic, antianaemic, antidiabetic, antiallergic, antiarthratic, antiulcer, antipsoriatic, vasotropic, antiinflammatory, neuroprotective, antiulcer, antipsoriatic, vasotropic, antirheumatic, antiarthritic, cardiant, hypotensive, anticonvulsant, nootropic, immunosuppressive, antiparkinsonian and ophthalmological activity. The polynucleotides and polypeptides of the invention can be used for diagnosing, treating or preventing cell proliferative disorder e.g. arteriosclerosis, atherosclerosis, cirrhosis, hepatitis, cancer, autoimmune/inflammatory disorders e.g. acquired immunodeficiency syndrome
                                                                                                                                                                                                                                    Secreted protein; SECP; human; antiarteriosclerotic; antiatherosclerotic; hepatotropic; cytostatic; anti-HIV; antiallergic; antiathmatic; cancer; antianaemic; antidiabetic; antiinflammatory; neuroprotective; antiulcer; antiarthritic; cardiant; hypotensive; gonadal dysgenesis; vasotropic; anticonvulsant; nootropic; immunosuppressive; pericarditis; antiparkinsonian; ophthalmological; cell proliferative disorder; arteriosclerosis; atherosclerosis; cirrhosis; hepatitis; angina pectoris; autoimmune disorder; AIDS; Crohn's disease; multiple sclerosis; epilepsy; ulcerative colitis; cardiovascular disorder; myocardial infarction; Raynaud's disease; myocarditis; neurological disorder; cataract; Huntington's disease; Alzheimer's disease; Creutzfeldt-Jakob disease; developmental disorder; Duchenne muscular dystrophy; antipsoriatic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Walia NK;

cardiovascular disorder e.g. myocardial infarction, angina pectoris, etc; cardiovascular disorder e.g. myocardial infarction, angina pectoris, etc; cardiovascular disorder e.g. myocarditis, pericarditis, etc; cardiovascular disorders e.g. epilepsy, Huntington's disease, Parkinson's disease, Alzheimer's disease, Creutzfeldt-Jakob disease, Parkinson's disease, Alzheimer's disease, Creutzfeldt-Jakob disease, etc; and disorders e.g. Duchenne and Becker muscular dystrophy, cataract, gonadal dysgenesis, Cushing's syndrome, etc. The products of the invention can also be used for drug screening, proteome analysis, microarrays creating knock-in humanised animals or transgenic animals to microarrays creating knock-in humanised animals or transgenic animals to transcript image of a tissue or cell type, for detecting differences in the chromosomal location due to translocation, inversion, etc., among normal, carrier or affected individuals, and as hybridization probes for mapping naturally occurring genomic sequences. ABB84649-ABB84673

represent secreted proteins encoded by the cDNA's shown in ABS57545-
ABS57569, described in the disclosure of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          197
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                257
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       496
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            712
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               556
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   772

included are an isolated nucleic acid molecule encoding NOVx, a vector comprising the nucleic acid, a cell comprising the vector, methods for determining the presence or amount of the polypeptide or the nucleic acid molecule in a sample, methods for determining the presence of or predisposition to a disease associated with altered levels of expression of the above polypeptide or nucleic acid molecule in a first mammalian subject, a method for identifying an agent that binds to the above polypeptide, a method for identifying a potential therapeutic agent for use in the treatment of a pathology that is related to aberrant expression or physiological interactions of the polypeptide, a method of screening for a modulator of activity or of latency or predisposition to a pathology associated with the polypeptide and a method for modulating the activity of the polypeptide cited above. The composition and methods are useful for diagnosing, preventing or treating diseases such as disease, ineurodegenerative disorders like Alzheimer's disease or dyslipidaemias, and other chronic diseases. These may also be used in chromosome mapping, tissue typing, preventive medicine and pharmacogenomics. The polypeptides are also useful as vaccines. The present sequence represents a NOVX protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                             7;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             197

The invention relates to novel polynucleotide and polypeptides for treating psoriasis or a sequence having at least 80% identity to the above sequences. The nucleic acid is useful for preparing a composition for diagnosing or treating psoriasis in a mammal. This sequence corresponds to one of the polypeptides of the invention.

                                                                                                                                                                              ਨੇ
                                                                                                                                                                                                                                   8
                                                                                                                                                                                                                                                                                           à
                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a novel peptide (I) comprising an acetyl CoA carboxylase (ACCase) having a deleted biotin binding domain, having a deleted carboxylase (ACCase) having a deleted biotin binding domain, having a carboxylase (ACCase) having a functional biotin carboxylase domain. A peptide of the invention is useful for identifying ACCETYL COA carboxylase inhibitors or activators, which involves combining the peptide and a compound to be tested for the ability to bind to the biotin carboxylase domain, under conditions that permit binding to the biotin carboxylase domain, the presence of binding indicating the compound is or may be an Acetyl CoA carboxylase inhibitor or activator. The method further involves employing the identified binding compound in an assay to detect inhibition or enhancement of Acetyl CoA carboxylase activity, and selecting a compound that inhibits or activates Acetyl CoA carboxylase activity, and selecting a compound that inhibits or biotin carboxylase compound to be tested for the ability to bind to the biotin carboxylase domain, the presence of binding to the biotin carboxylase compound to be tested for the ability to bind to the biotin carboxylase domain, the presence of binding indicating the compound is or may be fungicide, employing the identified compound in an assay to detect inhibition of Acetyl CoA carboxylase activity, and selecting a compound to that inhibits Acetyl CoA carboxylase activity, The present sequence that inhibits Acetyl CoA carboxylase activity. The present sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    771
                                                                         domain of obesity,
                                                                                                                                                    The invention comprises a crystallisable composition containing a carboxyltransferase (CT) domain of acetyl-coenzyme A (acetyl-CoA) carboxylase. The composition of the invention is useful for treating: metabolic syndrome, diabetes, obesity, cardiovascular disease, atherosclerosis, depression, cancer, hyperlipidaemia, dyslipidaemia, hypertension, hyperuricaemia and renal disfunction. The present amino acid sequence represents a human acetyl-CoA carboxylase of the invention
                                                                                                                                                                                                                                                                                                                                          81

further comprises: an isolated nucleic acid molecule comprises; an isolated by the nucleotides is an SNP given in the specification or its complement and encoding any one of the amino acid sequences given in the specification; an isolated polypeptide comprising an amino acid sequence given in the specification; an antibody that specifically binds to the polypeptide or its antigen-binding fragment; an amplified polynucleotide containing an SNP given in the specification and which is between about 16 and 1000 nucleotides in specification and which is between about 16 and 1000 nucleotides in length; a kit for detecting an SNP in a nucleic acid, comprising the polynucleotide, a buffer and an enzyme; a method of detecting an SNP in a nucleic acid molecule; a method of detecting a variant polypeptide; and a nucleic acid molecule; a method of detecting acidinal infarction. The novel detection method has cardiant activity.

The novel detection may be used in gene therapy. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a novel method for identifying an individual has an altered risk for developing myocardial infarction. The method comprises detecting a single nucleotide polymorphism (SNP) in any one the nucleotide sequences given in the specification in the individual, nucleic acids, where the presence of the SNP is correlated with an altered risk for myocardial infarction in the individual. The inventio further comprises: an isolated nucleic acid molecule comprising at lea
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The nucleic acids of the invention may be used in gene therapy. The method is useful in identifying an individual who has an increased or decreased risk for developing myocardial infarction and for preparing composition for treating or preventing myocardial infarction. This sequence represents the protein of a human myocardial infarction associated gene containing one or more SNP's of the invention. Note:
                                                                        SNP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ıg

ACC2

Molero-Navajas RES GARVAN INST MEDICAL Cooney GJ, 2005-386363/39 James D, (GARV-)

Identifying a modulator of whole body insulin sensitivity of an animal determining the AMP-dependent protein kinase or acetyl CoA carboxylase activity or free fatty acid level or oxidation in the animal administerwith a compound.

296pp; English Disclosure; SEQ ID NO

The invention comprises a method of identifying a compound that enhances or reduces whole body insulin sensitivity of an animal. The method

protein
CC) and/or
ell. The
involves administering a compound to a non-human animal, isolated tissue or cell having reduced expression of functional multi-adaptor protein Cbl, and determining the activity of acetyl CoA carboxylase (ACC) and/or amount of phosphorylated ACC enzyme in the animal, tissue or cell. The method is useful for identifying a compound that enhances or reduces whole body insulin sensitivity of an animal, and for preparing a composition for the treatment of obesity, diabetes, atherosclerosis and heart disease. The present amino acid sequence represents a human ACC2
                                                                                                                                                                                                       protein

```

The invention relates to a novel peptide (I) comprising an acetyl CoA carboxylase (ACCase) having a deleted biotin binding domain, having a deleted carboxylase (ACCase) having a deleted biotin binding domain, having a deleted carboxylase domain, and having a functional biotin carboxylase domain. A peptide of the invention is useful for identifying Acetyl CoA carboxylase inhibitors or activators, which involves combining the biotin carboxylase domain, under conditions that permit binding to the biotin carboxylase domain, the presence of binding indicating the compound is or may be an Acetyl CoA carboxylase inhibitor or activator. The method further involves employing the identified binding compound in an assay to detect inhibition or enhancement of Acetyl CoA carboxylase activity, and selecting a compound that inhibits or activates Acetyl CoA carboxylase activity, and selecting a compound that inhibits or activates Acetyl CoA carboxylase compound to be tested for the ability to bind to the biotin carboxylase domain, under conditions that permit binding to the biotin carboxylase domain, determining whether or not the compound binds to the biotin carboxylase domain, determining whether or not the compound in an assay to detect inhibition of Acetyl CoA carboxylase activity, and selecting a compound the inhibits Acetyl CoA carboxylase activity, and selecting a compound that inhibits Acetyl CoA carboxylase activity. The present sequence that inhibits and Accase BC domain of the invention.

Novel peptide comprising acetyl CoA carboxylase (ACCase) having delabiotin binding domain and carboxy transferase domain, and having functional biotin carboxylase domain, useful for identifying ACCase

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               I risk for developing nucleotide polymorphism
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            has an altered risk for developing myocardial infarction. The method comprises detecting a single nucleotide polymorphism (SNP) in any of the nucleotide sequences given in the specification in the individual nucleotide sequences given in the specification in the individual. The inventance of the SNP is correlated with an altered risk for myocardial infarction in the individual. The inventance of the specification or its complement and encoding any one of the amia acid sequences given in the specification; an isolated polypeptide comprising an amino acid sequence given in the specification; an another specification and which is between about 16 and 1000 nucleotides in the specification and which is between about 16 and 1000 nucleotides in length; a kit for detecting an SNP in a nucleic acid, comprising the polynucleotide, a buffer and an enzyme; a method of detecting an SN nucleic acid molecule; a method of detecting a variant polypeptide; method for identifying an agent useful in treating or preventing method for identifying an agent useful in treating or preventing action method has cardiant action method for identifying an agent useful in treating or preventing and action method has cardiant action method for identifying an agent useful in treating or preventing and action method has cardiant action method for identifying and identify method identify method identify method identify method identify method identify method identify method identify method identify method identify method identify method identify method identify method identify method identify method identify method identify method identify method identify method identify method identify method identify method identify method identify method identify method identify method identify method identify method identify method identify method identify method identify method identify method identify method identify method identify method identify method identified in method identify method identified method identified in method identified method identified

method is useful in identifying an individual who has an increased or decreased risk for developing myocardial infarction and for preparing composition for treating or preventing myocardial infarction. This sequence represents the protein of a human myocardial infarction-associated gene containing one or more SNP's of the invention. Note: sequence was not shown in the specification. The sequence has come from electronic sequence listing downloaded from the WIPO website.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ð
                                                                                                                                                                                                          The invention relates to novel human secreted polypeptides. The polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising the nucleic acids encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. The proteins of the proteins and therapy, and can be used to express them are also useful for producing the proteins are used to increase stem cell proliferation; to regulate haematopoiesis; and in bone, cartilage, tendon and/or nerve tissue growth or regeneration; immune suppression and/or stimulation; as anti-inflammatory agents; and in treatment of leukaemias.

AAU29510-AAU33304 represent the amino acid sequences of novel human corrected proteins of the invention

ACC is end product regulated and is also the limiting enzyme in de novo fatty acid biosynthesis. A changed enzyme interfere with both the lipid and fatty acid metabolism in plants. (Updated on 25-MAR-2003 to correct PN field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to identifying target proteins (ABB90790-ABB94016) for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using suitable search parameters, where plant sequences having an E-value greater by a factor of 3 than the E-value of most similar non-plant sequences are selected. The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are useful as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           equences
